ILC 2026

Stop Starting Over

Three simple prompts that get you better answers from AI

Jason Greer · Peel Business Design

HANDS UP

Who has taken AI’ s first answer and run with it?

That’s like asking one person, one time, and calling it research.

Hi, I’m Jason.

I use AI every day. I still get bad answers.

HANDS UP

How often do you use AI at work?

- Not yet
- Now and then
- Every day

Three ways to not settle for the first answer

1

The Room

Get more than one point of view.

2

The 100 Tries

See what makes it better or worse.

3

The Daily Loop

Make tomorrow’s prompt better than today’s.

Scan now: all three prompts, word for word · peelforward.com/ilc

BEFORE ANYONE OPENS A TOOL

AI is an eager intern.

It wants to help. It still needs a boss.

Leave out customer names, personal info and secrets.

Check it before you trust it.

Use the tool your company approves.

Works in ChatGPT, Copilot, Claude or Gemini.

OUR PRACTICE PLANT · MADE UP FOR TODAY

Why did scrap go up?

12	967	4	2
weeks	production runs	presses, 2 shifts	steel suppliers

Each run lists the press, part, steel, operator, start time, scrap and any comment from the floor.

PROMPT 1 OF 3

The Room

Get more than one point of view.

One voice gives you one view.

A room gives you the argument.

PROMPT 1 · THE ROOM

Copy this

> Act as a panel of 4 people: [the boss], [the person who does the work], [the customer] and a skeptic. Each one gives their view on this problem: [your problem]. Then let them respond to each other for 3 rounds. End with what they agree on and what they still disagree on.

Anything in [brackets] is yours to fill in. Have data? Attach it.

Pick people who would disagree

The boss
Cares about cost and time.

The person doing the work
Knows what really happens.

The customer
Feels the result.

The skeptic
Asks “How do you know?”

OUR PLANT · WHAT THE ROOM SAID

The room argued

PLANT MANAGER

“My gut says it’s Ridgeline material plus second shift on Press 2.”

QUALITY ENGINEER

“Those four rows are one problem showing up four ways.”

SECOND-SHIFT OPERATOR

“We’ve been writing it down since week 2. Nobody followed up.”

SKEPTIC

“This log can tell us where to look, not what’s broken.”

THE MOMENT THAT MATTERED

"Put the three of us on Presses 1, 3 or 4 and we scrap the same as day shift."

The operator in the room cleared the operators. Then go ask the real one.

THEY AGREED

It’s one spot, and it’s not one person.

THEY DISAGREED

Switch steel now, or keep running it to find the cause? cause?

The disagreement is where you go look.

Use The Room when people sit on both sides

- A hard decision
- A plan before you share it
- An email that could land wrong
- A change people will push back on

PROMPT 2 OF 3

The 100 Tries

See what makes it better or worse.

One game tells you a story.

A hundred games show you the pattern.

PROMPT 2 · THE 100 TRIES

Copy this

> Imagine 100 different ways to solve this problem: [your problem]. Sort them into best, average and worst. Then tell me what the best ones have in common and what the worst ones have in common.

REAL EXAMPLE · NO DATA NEEDED

100 ways to fix a huddle people tune out of

THE BEST ONES

Close the loop on what people raised.

Only cover the next 8 hours.

The crew talks as much as the boss.

THE WORST ONES

Treat tuning out as a discipline problem when it’s really a usefulness problem.

Add sign-in sheets, quizzes, longer meetings.

One-way: reading, lecturing, announcing.

ONE HONEST NOTE

The AI imagines the 100 tries. It doesn't run them.

Use it to spot patterns, not to trust exact numbers.

Have real data? Give it that instead.

SAME PROMPT, REAL DATA

Our plant already has 967 real tries

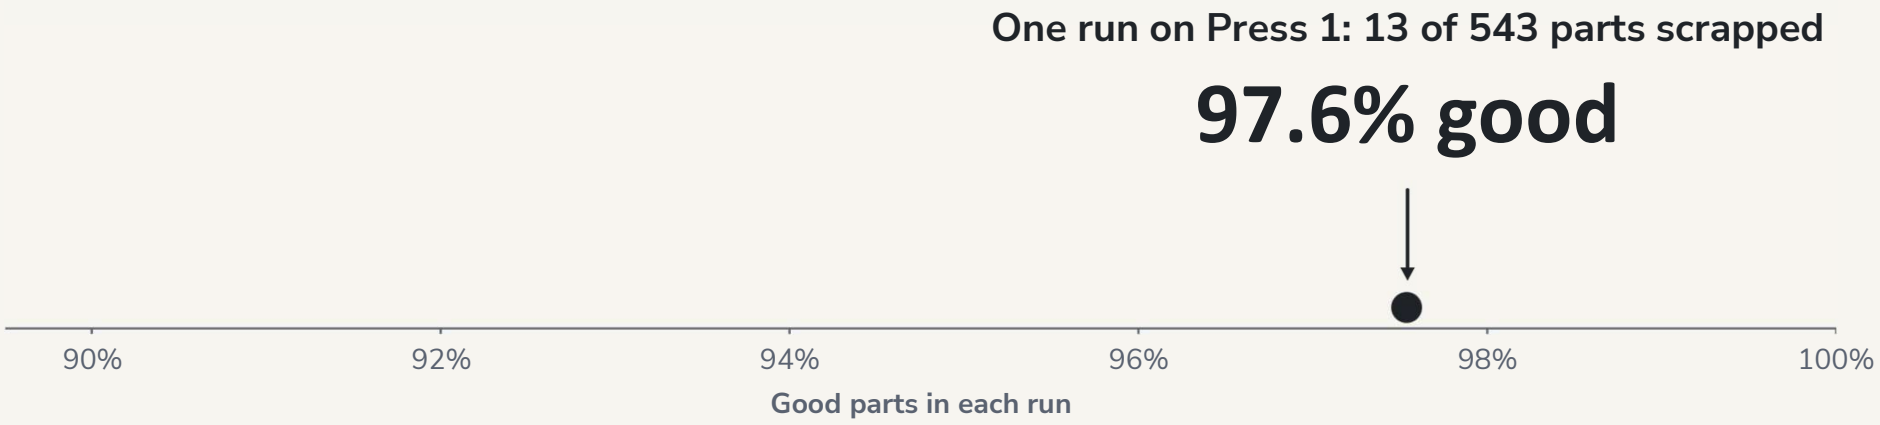

> Here is my data. Sort the runs from best to worst. What do the worst runs have in common? What do the best runs have in common?

What the file looks like: one row per run

Press	Start	Steel	Operator	Scrap	Comment
Press 2	Jun 22, 6:05 am	Ridgeline 225	Op 13	5 of 438	
Press 2	Jun 22, 2:10 pm	Ridgeline 225	Op 22	46 of 562	ran slow to hold size

OUR PLANT · ONE RUN

Every run is one dot

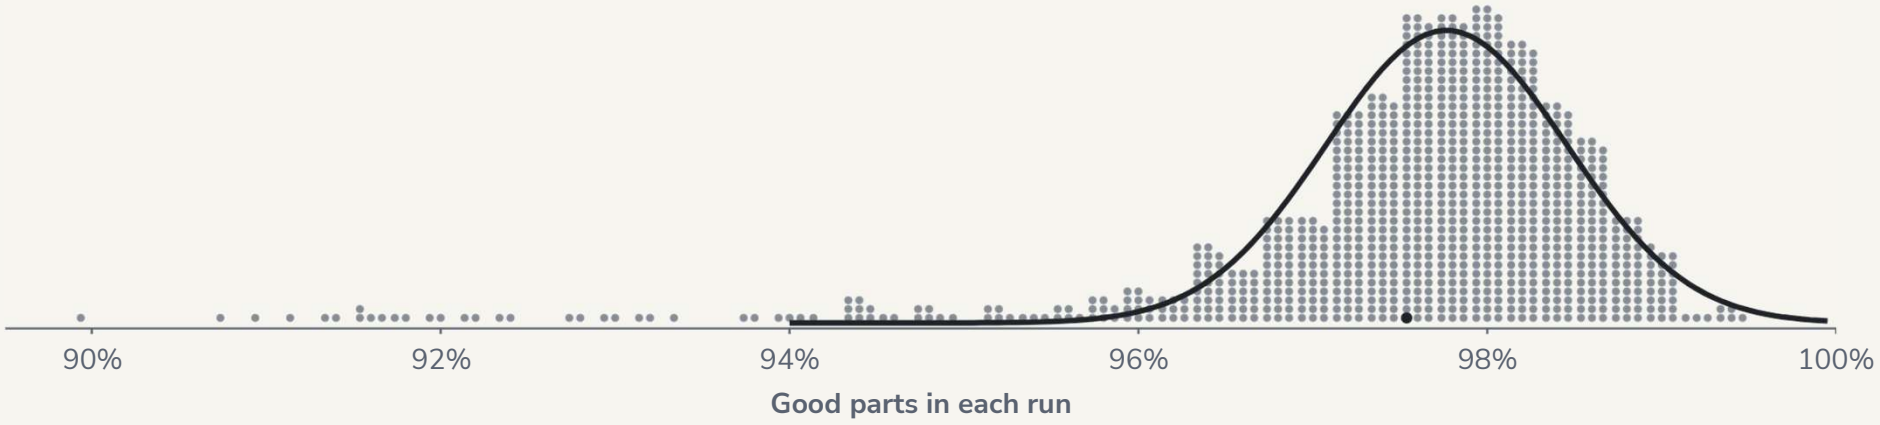

OUR PLANT · ALL 967 RUNS

Stack them up and a shape appears

967 runs. One dot each.

The curve: what a normal run looks like when nothing special is going on.

THE BEST RUNS

They had almost nothing in common.

Every operator, every part, both steels, both shifts. Mostly ordinary runs that had a good day.

Don’t copy luck.

YOUR GUESS · HANDS UP

Of the 25 worst runs, how many came from one spot?

- About 5
- About 10
- About 15
- All 25

One spot = Press 2, second shift, Ridgeline steel. About 1 run in 10.

THE WORST RUNS

25 of 25

were Press 2, second shift, Ridgeline steel.

THE EASY ANSWER WAS A NAME

Operator 14 has the highest scrap rate in the plant.

Hands up if you've seen a report blame a person when the problem was the process.

It looked across instead

4.8%

Operator 14’s scrap on Press 2

2.3%

Operator 14’s scrap on the other presses

Same person, normal everywhere else. It’s not one person.

“ You can’ t be curious and judgmental at the same time.”

“Who scrapped the most?” is a judgmental question.
“What do the worst runs have in common?” is a curious one.

Go look at Press 2.

About 1,700 extra scrapped parts in 12 weeks.

PROMPT 3 OF 3

The Daily Loop

Make tomorrow’s prompt better than today’s.

STOP STARTING OVER

The AI won’t remember what you learned today.

Your prompt will.

Memory features help you. A saved prompt helps your whole team.

PDCA = PLAN, DO, CHECK, ACT

You already know this loop

Plan

What will I try?

Do

What exactly do I do today?

Check

How will I know it worked?

Act

What will I change next time?

Shout it out: which step does your team skip most?

PROMPT 3 · THE DAILY LOOP

Copy this

> Help me with [your problem] using Plan, Do, Check, Act.
> **Plan:** What should I try?
> **Do:** What exactly should I do today?
> **Check:** How will I know if it worked?
> **Act:** What should I change next time?
> **At the end, write me a better version of this prompt to use tomorrow.**

OUR PLANT · WHAT CHECK SAID

It suggested a target before the test

7.7%

Scrap there now

3.5%

Suggested target

One good run is a signal. Confirm it with 3 to 5 more.

THE TRICK IS THE LAST LINE

“ Write me a better version of this prompt to use tomorrow.”

You don’t have to be good at AI. The prompt gets a little better every day.

OUR PLANT · THE PROMPT IT WROTE FOR TOMORROW

What it added for tomorrow

STARTS FROM TODAY

“What we already know: …”

CLOSES THE LOOP

“What I tested yesterday: [ran Press 2 evenings on day-shift settings]”

ASKS FOR A TARGET

“Set a success number before I start.”

CHECKS THE DATA

“If anything in the data looks wrong or missing, tell me.”

Tomorrow: new chat, paste it in, attach the new data, fill in the blanks.

Save it like standard work

Put a date on it.

Give it an owner.

Keep it where your team can find it.

Read it before you save it. Trim it when it gets past one screen.

SHOUT IT OUT

Press 2, 2 pm.

What do you check first? Who do you ask?

AI is a tool, not a problem solver

Root cause analysis

Keep asking why until you reach a cause you can test.

Go to the gemba

Stand at Press 2 at 2 pm with the crew.

Reason it through

Does your story fit every fact, even the odd ones?

Check the AI

97, 103, 102: same runs, three counts. Tell it how you count.

Gemba: the place where the work actually happens

FIVE STEPS OF ROOT CAUSE ANALYSIS · CALL IT OUT

AI or people?

1	2	3	4	5
Spot it	Narrow where	Go and see	Ask why	Test and confirm
Your people, your charts, or AI	AI is fast here	Only people	People lead, AI suggests	People decide

AI gets you to the gemba faster. It doesn’t make the trip for you.

Which one should I use?

I need other points of view.	→ **The Room**
I want to know what makes it better or worse.	→ **The 100 Tries**
I'll be doing this again tomorrow.	→ **The Daily Loop**

YOUR TURN · 5 MINUTES

Try The Room right now

> Act as a panel of 4 people: [the boss], [the person who does the work], [the customer] and a skeptic. Each one gives their view on this problem: [your problem]. Then let them respond to each other for 3 rounds. End with what they agree on and what they still disagree on.

Need a problem? Handoffs that miss things. New hires quitting in 90 days. Late-order calls.

peelforward.com/ilc

Never used AI? Pair up. No AI allowed? Run it with four people at your table.

THREE THINGS TO TAKE HOME

1. Don’t take the first answer.
2. Look across before you blame.
3. Make tomorrow’s prompt better than today’s.

AI finds where.
You still find why.

Questions?

1. Don’t take the first answer.

2. Look across before you blame.

3. Make tomorrow’s prompt better than today’s.
